

LVE35

3,500 LB. CAPACITY

INTEGRATED LITHIUM-ION THREE-WHEEL FORKLIFT

SPECIFICATIONS

INTEGRATED LITHIUM-ION PROVIDES SIMPLICITY AND REDUCES COST.

Many businesses know that it takes Lithium-ion to get the most efficiency, uptime and cost effectiveness out of an electric forklift. And now customers are learning that it takes an integrated power source for simplicity of operation and optimal ergonomics. The Big Joe LVE35 delivers all of the above—an optimal package that supports the operator while driving down cost of operations. Big Joe is one of the few suppliers to develop and produce both forklift and battery, so customers have one expert supplier to help from end to end.

Integrated Lithium: Simple and Effective

The UL-recognized Lithium-ion battery is designed and manufactured by Big Joe, in our state-of-the-art, automated facility to deliver the highest levels of quality, durability and reliability. The battery pairs seamlessly with the truck, requiring no additional displays, connection ports, power buttons or other complications. Simply buckle up, turn the key, release the parking brake and go.

Advanced Electrical System

Big Joe AC controller technology delivers high performance efficiently while significantly reducing maintenance costs and extending the vehicle's service life. The battery management system continuously monitors performance during operation and charging to optimize the battery's service life.

A Drivetrain for High Productivity and Low Operating Cost

Dual AC drive motors enable LVE35 to pivot on its own center, which supports operation in tight spaces. Transistor motor controllers deliver smooth control for handling large or delicate loads. In addition to regenerative braking, LVE35 features maintenance-free wet disc brakes for confident stopping power.

FEATURES

Charging Made Easy

Every LVE35 forklift comes standard with an onboard charger that plugs into a typical single-phase 120V or 240V wall outlet, allowing you to recharge almost anywhere. For operations that require faster charge rates, offboard chargers that conveniently connect to the truck's integrated charge port are available. Since the battery doesn't need to cool down after charging, your truck can spend more time working. Unlike some other suppliers, Big Joe provides—and supports—the forklift, battery and charger.

A Battery without Headaches

The Lithium-ion battery is completely maintenance-free. That means no watering, toxic fumes or corrosive and explosive gases. And you only need one battery per truck—no cranes, hoists or roller systems for swapping batteries are required. This simplicity not only saves space in your warehouse—it also reduces overhead since staffing doesn't need to be dedicated to battery services.

Smooth and Efficient Hydraulic Controls

Ergonomic controls are within easy reach of the operator and allow for smooth, precise load control. Energy efficiency is optimized since the hydraulic pump only activates when flow is needed and utilizes proportional control.

Wireless Telematics for Operational Insights

LVE35 comes standard with onboard telematics that track key utilization metrics like key-on time, energy consumption, error codes and recharging patterns. This data can help spot missed opportunities for recharging, identify peak usage times and monitor the health of your equipment.

RUN TIMES

Power to Get the Job Done

Run times in the tables below are provided as a guide and do not account for all factors that may affect run time. It is highly recommended to perform a power study to more accurately determine your battery size and charging needs. Big Joe forklifts with Lithium-ion batteries come standard with telematics that enable monitoring of truck run time, charge time, energy usages and many other data points. This information can help you to make the most of your equipment and drive down operating costs.

Tailored to Your Specific Needs

Based on experience helping customers electrify their fleets and take advantage of the benefits of integrated Lithium-ion, Big Joe has categorized applications into three main types to help estimate run time:

Light Duty	Light duty applications, in terms of energy usage, account for a large portion of customer use cases. These are applications with level surfaces - where the truck typically handles 50% or less of its rated capacity.
Medium Duty	Medium duty applications are very common and involve handling loads that typically exceed 50% of the truck's rated capacity. There may be occasional: <ul style="list-style-type: none">• Operation up and down ramps• Lifting to upper rack heights• Use of attachments such as fork positioners and multi-pallet handlers (i.e. single-doubles)
Heavy Duty	Heavy duty applications are not as common and include frequent: <ul style="list-style-type: none">• Operation up and down ramps• Handling loads at or near the truck's capacity• Lifting to upper rack heights• Use of heavy duty attachments (clamps, rotators, push-pulls and turrets)

Stay Up and Running

The forklift's digital display includes a clear and easy-to-read battery indicator that shows the current state of charge. This helps operators to know exactly how much charge remains and remember to recharge as planned. Now, thanks to Big Joe's progressive warning system, the operator will be alerted should the battery state of charge fall too low. A lift interrupt and multiple levels of traction speed reduction help give the operator plenty of time to get to a charger without fear of over-discharging the battery.

LVE35 Run Time ¹			
	Application Intensity		
Battery Capacity (kWh)	Light Duty	Medium Duty	Heavy Duty
18.4	8h 45m	5h 15m	3h 45m

1. Run times are provided for purposes of estimating battery and charger requirements and are not a guarantee. Run times are from fully-charged battery to lift interrupt. Actual run times vary widely based on truck duty cycle, ambient conditions and other factors. A product demo and/or power study are highly recommended.

CHARGE TIMES

Flexible Charging That Works for You

Thanks to the in-house design and expertise of Big Joe, the charger, battery and forklift work seamlessly together. Big Joe’s UL-certified chargers automatically adjust power based on the state of the battery in order to minimize charge time while optimizing the battery’s overall service life.

To help make charging easy, all Big Joe LVE35 models come standard with an onboard charger that can accept both 120VAC and 240VAC, single-phase input. Cables are included for both supply voltages. The onboard charger automatically identifies input voltage and charges the battery accordingly.

For faster charging, optional offboard chargers, also called “wall chargers,” are available. Offboard chargers are typically hard-wired and are capable of faster charge rates. A power study is recommended in order to select the optimal battery and charger combination for your application’s unique needs. For convenience, all LVE35 models include a charge port for offboard power, accessible without opening the hood or removing panels.

Regardless of which charger you pick, the design is plug and play. That means minimal operator training and input is needed to keep your operation running smoothly.

Charger Specifications					
Charger Output Power	kW	Onboard Charger		Offboard Three-Phase Chargers	
		1.2	2.8	7.2	7.2
Input Voltage	VAC	120	240	208/220/240	480
Input Current	A	15	15	35	15
Output Current @ 80VDC	A	15	35	100	100
LVE35 Charge Time ¹					
Battery Capacity (kWh)	18.4	13h	5h 45m	2h 15m	2h 15m

1. Charge times shown are estimates only and represent charging under ideal conditions and proper power supply to the charger. Charge times are based on recharging from lift interrupt to fully-charged.

	10.2	Oil flow for attachments		gpm	5.3
	10.5	Steering design			Hydraulic

¹ Right angle stack is provided without clearance and assumes a load 40in. wide x 48 in. long. LVE35 features dual drive motors capable of counter-rotating when turning. The correct formula for calculating right angle stack with this configuration is: turning radius + $\sqrt{(x + \text{load length})^2 + (0.5 * \text{load width})^2}$

MAST SPECIFICATIONS

LVE35												
Mast Type	Overall Dimensions (in.) ¹										Rated Capacity (lb.) at 24" Load Center ²	
	Lift Height (Top of Forks)	Lowered Height	Extended Height				Free Lift Height

Established in 1951, Big Joe is a customer-driven North American material handling equipment company. We distribute innovative products for in-between-handling applications, purpose-built counterbalanced lithium forklifts, and market-leading autonomous solutions. Based in Madison, Wisconsin, we provide engineering expertise, customer service, aftermarket parts, and warranty support to our extensive dealer network and customers.

Certification: Big Joe lift trucks are built in compliance with ANSI B56.1 and OSHA section 1910.178(A)(2). Lift trucks specifications are subject to change without notice. Any specifications critical to the intended application of the forklift should be reviewed with your Big Joe dealer. Images may show optional equipment not available in all regions.
